Water heater switches save the co-op money.

Please call us at 219-866-4601 if we can install a new load management switch on your water heater. The new switches will help the co-op keep costs low for everyone. The more switches we can deploy, the more money we will all save.

Here's how the program works:

1. Power supplier sees the power supply getting stressed by unusually high energy use.
2. Power supplier turns on load management switches for short period of time to reduce use.
3. Member's water heater is turned off for short period of time.
4. Power supplier sees grid recover and turns off switches.
5. Member's water heater is turned back on.
6. Whole membership avoids higher energy costs.

Consequences of not using load management switches;

1. Power supplier sees the power supply getting stressed by unusually high energy use.
2. Power supplier needs to purchase additional power unexpectedly to supply member homes.
3. Cost of unexpected power purchase is significantly higher than the normal contract purchase.
4. Higher cost of unexpected power purchase is passed along to members.
